

MILITARY INTELLIGENCE

The US ARMY, NAVY, AIR FORCE, and MARINES
BELIEVE CLIMATE SCIENCE

The US Military is present on every continent and maintains hundreds of locations in the United States.

All branches of the US military are planning for sea level rise and protection of vulnerable installations.

Military activities consume huge quantities of fossil fuels and are responsible for many major pollution events. Military function will change as global warming redefines readiness and objectives.

Military culture stresses discipline and organization.

In a case of global climate chaos, the military has vast capability in evacuation, food and water, shelter, medical emergency, and all essentials.

Relations between nation states will continue to occupy planners even when the collapse of the biosphere is the great existential threat.

The critical mission for the military in times of climate change and political inertia: plan for peace.

GREEN NEW DEAL

We work for a global consensus condemning inequality.
We enhance and enforce environmental protection laws.
We commit to work in solidarity for a peaceful transition.
We pledge to the youth of today our most diligent efforts.

MILITARY INTELLIGENCE
